Settings

General Settings

Concurrent Threads	Number of browser instances to run concurrently.
Ping/Min	Ping rate – maximum number of hits to server per minute.
Enable Data Caching	Data caching stores the server pages into files before processing. Cached data is valid for **Cache Duration** after which data is discarded. If **Data Caching** is enabled, the same URL will not be hot twice if data from the previous hit is valid, instead data will be read from file.
Cache Duration	Duration in minutes for which data in cache is valid.
Write errors to file	Write application errors to files.
Web Requests Retry Count	The maximum number of retries before a URL is declared inaccessible.
Date Format	The Default Date format.
Stock Alter Scheduler	Day and time for the stock alert scheduler to run.
Database Path	Path to Access Databases containing update and crawl databases.
Generate Crawl Tables	Generates table structure in crawl database. [Note1]
Generate Update Tables	Generates table structure in update database. [Note1]

WebSpider Docuentation

Image Folders	Folder for downloading images.
Clear Internal Data	Clears all internal data from application storage.[Note 2]

Notes

Note 1: Clear Internal data before clearing Generate Tables

*Note 2: Restart the application after cleaning internal data to load brand categories automatically. Otherwise you may load brand and categories by clinking on the **Reload** icon in AdiGlobal tab.*

Email Settings

Send Errors as email	Sends error details by email when cheked
Send mail to	Sends mail to this address. You can add multiple addresses separate by comma.
